Motto: There is no problem that cannot be solved with one line of code, if there is, two lines.

About

● Web front-end: Master the vue development framework, be able to independently build vue front-end and back-end separated front-end scaffolding, be proficient in using JS, CSS core technologies, network request methods, browser rendering principles, and performance optimization of front-end websites. Master less, sass front-end style libraries, and develop projects efficiently. Be able to use git version management tools proficiently. Master photoshop related technologies, be able to quickly read and understand technical documents such as front-end related components, libraries, plug-ins, and develop efficiently.

Have a high pursuit of user experience and reasonable interaction, and provide guiding suggestions for the project. Have certain skills and experience in compatibility issues related to front-end technology, collect and understand related demo libraries, and facilitate development.

Experience

2021.07.23-today   Beijing Hualian Technology Co., Ltd.   Hybrid front-end development

Why choose this company: I personally feel that the current company is more suitable for my development. Although I like to delve into the bottom layer, I prefer to do everything myself.

Development efficiency: 1-2 weeks to complete a mixed development project, including the time to read documents; including watch development, uni-app development, etc.;

2018.10-2021.07.18   Beijing Image Media Co., Ltd.   Project Manager

Why choose this company: After a period of initial trials, we chose this relatively stable and promising developing company, which mainly serves the medical industry and is a media company, not an Internet company.

Development efficiency: Maintain 4-8 websites a month, refactor the code, database, and backend of the old website; develop new websites and select technologies.

Summary: Increased experience in team management and a more familiar idea of the project's 0-1 process. A clearer understanding of the backend system

2018.03-2018.10   Beijing Shengjie Witkey Co., Ltd.   Built-in applet development

Development of built-in mini-programs for applications such as Tencent WeChat, Tiktok, and Tencent QQ
